Github: <https://github.com/theguuholi>

Brazil, São Paulo

Senior Software Engineer

Gustavo has been a developer for 11 years. He is a prolific, proactive, and responsible full-stack developer focusing on web systems. He values sharing knowledge, high-quality written apps, and very well-written tests. Gustavo is passionate about building and scaling real-time systems.

Work Experience

STORD - USA (2025/05-actual)

Senior Software Engineer

LoLo - USA (2023/07-2025/05)

Lead Software Engineer

- Architected the entire application using Elixir, Phoenix, and LiveView, ensuring scalability, maintainability, and responsiveness.
- Built highly scalable payment processing systems using Elixir and Stripe, handling complex payment workflows with reliability.
- Trained the team in writing clean, maintainable, and test-driven code (TDD) in Elixir, fostering a culture of craftsmanship.
- Led the team in adopting best practices for Elixir, including architectural patterns and LiveView-specific workflows.
- Designed and implemented OBAN jobs to efficiently process and send large volumes of emails using SendGrid.
- Developed a sophisticated and reliable solution for managing Stripe payment processing, addressing intricate business logic.

SANBOXAQ - USA 2023

Senior Fullstack Developer

- Enhanced scalability of front-end features by implementing efficient pagination and sorting mechanisms using React.
- Established reusable patterns in React to accelerate feature development and maintain consistency.
- Ensured production reliability by creating testable features with Jest and Cypress, minimizing issues in live environments.
- Integrated GraphQL APIs into the front end to deliver seamless and dynamic features.
- Designed and implemented the front-end UI using MUI, creating reusable patterns to standardize components and improve productivity.
- Delivered high-quality code by leveraging a CI/CD pipeline with React, Jest, and Cypress for automated testing and deployment.
- Collaborated with the design team to improve UX by providing insights and suggestions for better UI design.

Clarus R&D- USA (2021-2023)

Senior Software Engineer

- Developed a real-time feature for Clarus that allowed clients to import PDF W2s, process them in the background, store the data in an S3 bucket, transform it via an API into REST,

save it in the database, and notify the customer.

- Engineered a solution to handle and process thousands of W2s, including complex CSVs with over 10,000 rows, ensuring efficient real-time data ingestion and database storage.
- Improved team productivity and code delivery by creating a robust CI/CD pipeline using GitHub Actions and EKS.
- Mentored team members in adopting best practices for software development, including test-driven development (TDD) and modern technologies.
- Encouraged clear and effective communication by maintaining high standards for commit messages and pull request (PR) descriptions, facilitating smoother collaboration.
- Supported the team in learning new technologies, fostering continuous growth and adaptability.

Zubale - USA (2020-2021)

Lead Software Engineer

- Optimized an API to handle and store nearly 1 million records in under 10 minutes, significantly reducing processing time and avoiding overtime for the team.
- Mentored developers on best practices for Test-Driven Development (TDD) and deploying applications on Kubernetes.
- Contributed to the modernization of legacy systems, replacing outdated technologies with highly available and scalable solutions.
- Assisted in building a MobileApp with geolocation features, enabling users to efficiently pick and deliver orders.
- Developed large-scale systems incorporating Message Brokers and GraphQL, delivering high-quality, maintainable code.

HDI - Brazil (2019-2020)

Techlead

- Trained over 20 developers to adopt new technologies, facilitating the retirement of outdated systems and improving team adaptability.
- Designed and implemented a complex, generic API that consolidated the functionality of over 30 individual APIs, streamlining operations and reducing maintenance overhead.
- Led the migration from monolithic services to microservices, driving digital innovation and enhancing scalability and flexibility within the company.

TOTVS - Brazil (2019-2020)

Senior Software Engineer

- Led the migration from monolithic services to microservices, driving digital innovation and enhancing scalability and flexibility within the company.

Accenture - Brazil (2016-2018)

Senior Software Engineer

- Led the migration from monolithic services to microservices, driving digital innovation and enhancing scalability and flexibility within the company.

CWI - Brazil (2014-2016)

Software Engineer

- Fast delivery, with commitment in all situations and high-quality
- Client has given good feedback about the team developer and work realized

Educations and Certifications

- **University “Faculdade Tecnologica” (FATEC), Sao Paulo, Brazil (2012-2014)**
- **NZLC (New Zealand) - Exchange English**

Tecnologies and Languages

- **Languages:** Elixir, SQL, JavaScript, Java
- **Test:** Test-driven Development (TDD), JUnit, Jest
- **Frontend:** Tailwind CSS, HTML, REST, GraphQL, Websocket, React, ReactNative
- **Frameworks:** Absinthe, Broadway, Ecto, Phoenix, Live view, Ecto, Oban, OTP, Spring, Springboot, Spring Cloud, Hibernate, NextJS, NestJs, DDD, Solid, DesignPatterns
- **Message Brokers:** Apache Kafka, PubSub, EQS
- **Database:** PostgreSQL, MongoDB, Elasticsearch, Bonsai.IO, MySQL, Oracle
- **Code Version:** Git, Github, Gitlab
- **DevOps:** Kubernetes, Docker, HELM, Google Cloud, Docker-Compose, GKE, AWS, EKS, ISTIO, Kong, OpenTelemetry, ECS, GithubActions, CircleCI, S3, Charts, GCR, ApiGateways, Kong, Prometheus, Konga, Prometheus, Kibana, OpenTelemetry
