SUMMARY

Senior Elixir Engineer with 11+ years of experience designing and operating scalable distributed systems across logistics, fintech, and SaaS. Deep expertise in Elixir/OTP, Phoenix, LiveView, and real-time asynchronous architectures — shipping systems that hold up under real production load.

Published author on AI-assisted development workflows. Hands-on practitioner integrating Claude, Cursor, and MCP servers into engineering cycles. Led teams in TDD, clean architecture, and AI tooling — reducing onboarding from 1 week to 1 hour and virtually eliminating bugs in peak months.

CORE SKILLS

Languages & Runtimes: Elixir, Go, Java, TypeScript

Data & Messaging: PostgreSQL, MongoDB, Kafka, GraphQL

Frameworks: Phoenix, LiveView, Oban, React, Spring Boot

Infrastructure: AWS (EKS, S3), GCP, Docker, Kubernetes, GitHub Actions

AI Tooling: Claude Code, Cursor, MCP (Freshdesk, Atlassian, Datadog)

Practices: TDD, Clean Architecture, Event-Driven Design, CI/CD

EXPERIENCE

Stord — Senior Software Engineer

May 2025 – Present | United States (Remote)

- Built an internal AI-powered on-call assistant integrating the live codebase with MCP servers for Freshdesk, Atlassian, Datadog, and Kafka — enabling engineers to resolve incidents in seconds without context-switching
- Implemented Tax ID support for 10+ identifiers (CPF, CNPJ, EORI, VAT, RUT, RFC, CUIT...) across Brazil, Mexico, EU, UK, Chile, Colombia, and Argentina — directly enabling international merchant onboarding
- Engineered combine/separate shipment logic handling ~100,000 daily orders, preventing incorrect fulfillment statuses on split shipments
- Built shipping A/B testing framework and order forecasting system, driving data-driven operational decisions
- Built freight pallet visualization feature, reducing support ticket volume by ~80 tickets per incident cycle
- Coached team on Claude plan mode, structured prompting, and AI plugin workflows

Elixir · Phoenix · Go · React · Oban · PostgreSQL · Kafka · AWS · GCP · Datadog · Claude Code · MCP

Lolo — Senior / Lead Software Engineer

Aug 2023 – May 2025 | United States (Remote)

- Architected the full backend from scratch with Elixir, Phoenix, and LiveView — supporting ~800 senders and 50+ partners
- Built Stripe payment processing system handling 200,000+ transactions/month with subscription billing, automated retries, and failure recovery
- Designed Oban-based job pipelines with SendGrid delivering 400,000+ emails and SMS per week, fully decoupled from the request lifecycle
- Led a team of 5 engineers in adopting TDD and clean architecture — reducing onboarding from 1 week to 1 hour and virtually eliminating bugs in peak months

| Elixir · Phoenix · LiveView · Oban · Stripe · SendGrid · PostgreSQL · GitHub Copilot

Clarus R+D — Senior Software Engineer

May 2021 – May 2023 | Columbus, Ohio (Remote)

- Built real-time W2 PDF ingestion pipeline (S3 + parsing API + PostgreSQL) — reducing per-client processing from days to seconds, handling ~1,000 W2s per client per cycle
- Contributed to a platform enabling clients to claim over \$100M in R&D tax credits annually
- Eliminated manual deployments by establishing CI/CD pipeline with GitHub Actions and AWS EKS

| Elixir · React · GitHub Actions · AWS EKS · S3 · PostgreSQL

Zubale — Senior Software Engineer

Jul 2020 – Jul 2021 | United States (Remote)

- Optimized Elixir data ingestion API to process ~1M records in under 10 minutes — down from ~5 hours — eliminating a daily operational bottleneck and weekend overtime
- Architected distributed systems with Kafka and GraphQL powering ~100,000 deliveries/day across Brazil, Mexico, and Colombia
- Built geolocation-enabled mobile backend for contractor order fulfillment across 3 countries

| Elixir · GraphQL · Kafka · React · React Native · MongoDB · PostgreSQL · Kubernetes

HDI Seguros — Lead Software Engineer

Jul 2019 – Jul 2020 | São Paulo, Brazil

- Developed production-grade RESTful APIs (Richardson Level 2) in Java 8 and Spring Boot as part of company-wide Digital Modernization Strategy
- Engineered the Open Insurance API per SUSEP's regulatory framework — among the first insurers in Brazil to comply
- Replaced legacy Progress Database with PostgreSQL and MongoDB; containerized services with Docker and Kubernetes

| Java 8 · Spring Boot · Go · PostgreSQL · MongoDB · Docker · Kubernetes · Swagger

TOTVS — Senior Software Development Engineer

Oct 2018 – Jun 2019 | São Paulo, Brazil

- Led migration from monolithic architecture to microservices, increasing deploy frequency and enabling faster innovation

| Java · Spring Boot · Microservices · Docker

Concrete Solutions — Senior Software Engineer

Jan 2016 – Oct 2018 | São Paulo, Brazil

- Built REST APIs and business tools for enterprise clients; delivered microservices architectures with Spring Cloud
- Implemented BDD/Cucumber automated test suites for mobile applications

| Java 8 · Spring Boot · Spring Cloud · React · Angular · Oracle · BDD/Cucumber · AWS

CWI Software — Software Engineer

Jan 2015 – Dec 2015 | São Paulo, Brazil

- Integrated enterprise systems via JMS and REST web services; full-stack development with Spring, Hibernate, and Angular

| Java · Spring · Hibernate · JMS · Angular

Ericsson Inovação S/A — Software Engineer Intern

Jan 2013 – Dec 2014 | São Paulo, Brazil

- Built CI pipelines with Jenkins; designed and implemented inventory management system with Java and JSF

| Java · JSF · Jenkins · HTML
